

CS 2800 – Web Development I
Fall 2015
Assignment 7 – Working with lists and links

Due: October 13, 11:59 pm.

Turn in: Upload your zipped folder to the dropbox on Pilot. This folder should contain your html document, your css file, and any files needed for step 4.

1. **Create a folder named yourLastName_assignment7.** Put all documents and files used for this assignment in that folder.
2. **Create an html document** that contains three separate lists. The first and third list should be an unordered list; the second list should be an ordered list. You may write your own text or just use a lorem ipsum generator. Be sure your html page contains the required elements of an HTML5 page and that your name appears as a heading at the top of the page. Link your html document to the css document you will create in the next step.
3. **Create a css document** that styles the lists in this manner:
 - List 1: Change the bullet style
 - List 2: Change the numbering style
 - List 3: use an image as a bullet. Be sure the bullet is sized appropriately.
4. **Add a fourth list** to your html file that contains the following links. Links 3 and 4 should open in a new window. You do not need to apply styling to this list.
 - Link to another web site
 - Link to another position on the current web page.
 - Link to an audio file
 - Link to a video file

The audio and video files may be files included in your assignment folder or they may be online links
